Rotary Grinding and Polishing Instruments

A tradition of quality – Ahead through innovation

As early as 50 years ago, when the very first polishers started being produced, Pforzheim goldsmith suppliers were being provided with silicone polishers.

Pforzheim, the centre of the German jewellery industry, fosters the further development of special qualities and instruments. Special forms of polishers and abrasives – from soft pumice to diamond grits – are created to meet the requirements of jewellery manufacture.

Today, EVE exports jewellery polishers all over the world.
